In order to achieve the best possible outcomes while decreasing the risk of undetected injuries, the management of trauma patients requires a highly systematic approach. Prehospital trauma care involves first aid and basic life support administered by emergency services personnel. In the hospital setting, the treatment of trauma patients is traditionally divided into primary (Advanced Trauma Life Support), secondary, and tertiary surveys.

Pelvic fractures, although infrequent, are a significant cause of morbidity and mortality in the trauma population. Currently, the mainstay of emergent management of a suspected pelvic fracture is placement of a pelvic binder, and their use in the prehospital setting is recommended for any individual involved in high-energy trauma.

~~Emergent management of the suspected pelvic fracture ...~~

Both small catheter tube thoracostomy and large-bore chest tube thoracostomy have been shown to work for the nonemergent management of patients with traumatic pneumothorax or hemothorax. This study was conducted to compare the efficacy of a small chest tube with that of a large tube in emergent thoracostomy due to chest trauma.
