Cross training is good for general fitness and helps when the ski season comes. However, sports like running, cycling, swimming and tennis are not on their own, the best preparation for skiing. Sure, these sports can get you fit, but this kind of training won't stop the skiing muscles from burning when you hit the slopes again.

How to get ski fit - ski fitness | All Mountain Performance

When skiing, you're going to need to be able to rely on your muscles - in particular, your quads and glutes. The quadriceps are the muscles at the front of your thighs. They're important for skiing because they're what you'll use to bend your knees.

How to Get Fit for Skiing | Halsbury Ski

These muscles hold you in position as you ski and provide protection for your knees. Great exercises for the quadriceps include squats and lunges." Hamstrings and Glutes: "When skiing downhill, you typically hold your body in a flexed position, which is leaning forward from the hips. This requires great strength from your hamstrings and glutes as they help stabilize your body.

Get Fit for Ski Season: 6-Week Workout Plan Pt. 1 | ACTIVE

Ask one of the instructors to write a special programme just for you to get you "ski fit". You'll need a minimum of 8 weeks to get in shape, ideally 12 weeks so don't leave it too late! Another option is to join some group exercise classes.
