of development. Hence the model generates a novel connection between the initial level of poverty (rather than inequality) and the long-run level of development. Whether the market is equalizing or disequalizing thus depends on how well-off the economy is to start with. The analysis can be extended to accommodate initial inequality as well.

Globalization and its relation to poverty reduction and development is not well understood. The book identifies the ways in which globalization can overcome poverty or make it worse. The book defines the big historical trends, identifies main global flows - trade, finance, aid, migration, and ideas - and examines how each can contribute to undermine economic development. By considering what helps and what does not, the book presents policy recommendations to make globalization more effective as a vehicle for shared growth and prosperity. It will be of interest to students, researchers and anyone interested in the effects of globalization in today's economy and in international development issues.

Globalization and Development draws upon the experiences of the Latin American and Caribbean region to provide a multidimensional assessment of the globalization process from the perspective of developing countries. Based on a study by the United Nations Economic Commission for Latin America and the Caribbean (ECLAC), this book gives a historical overview of economic development in the region and presents both an economic and noneconomic agenda that addresses disparity, respects diversity, and fosters complementarity among regional, national, and international institutions. Globalization and Development is a "cross-national study" on the "interstate dispersion" of the impacts (on growth, inequality and poverty) that international economic integration provides to the economies of the developing countries. In order to present the "Leading Issues in Development with Globalization" in a balanced manner, to identify differences and commonalities among "Country Experiences" in development with globalization, and to introduce diversified development paradigms with forward-looking discussions "In Search of a New Development Paradigm" for the post-MDGs era, this publication consists of three volumes and four main parts. Volume III (Part IV) presents the diversified development paradigms such as the GNH (Bhutan), the sufficiency economy (Thailand), the reform and opening up paradigm (China), the African and Latin American paradigms, and the Islamic development paradigm. The Concluding Chapter presents the evolution of development paradigms in the global development cooperation community after World War II, and then offers a glimpse into new development paradigms for the post-MDG era. This book intends to serve as a unique and comprehensive guide for those in the international development community on the subjects of diversified development paradigms/paths under globalization and other challenges in the post-MDG era.

Volume I (Part I) introduces the evolution and facets of globalization, and the challenges that we face in our development efforts under globalization. Findings from the old and new empirical studies are consolidated for us to answer the following question. What do we really know about the impacts of globalization? Volume I (Part II) contains thematic and issue-oriented discussions on the key facets of globalization. This book intends to serve as a unique and comprehensive guide for those in the international development community on the subjects of diversified development paradigms/paths under globalization and other challenges in the post-MDGs era.

This book presents economic and socio-cultural perspectives on globalization from emerging markets. It explores the links between globalization and development, and reveals the dynamics, strengths and weaknesses, trends in and implications of globalization in emerging market economies. Gathering papers by leading experts in the field, it shares essential insights into the history and status quo of globalization processes and structures; identifies the opportunities provided by and risks posed by globalization; and sheds light on the way to global peace. The topics addressed range from globalization development within the Group of Twenty (G20), populist events such as "Brexit" as a form of historical irony, and a zeitgeist analysis of the globalization spirit; to the evolution of higher education and public administrative systems under the weight of globalization; not to mention emerging topics such as the informal economy and new rules for fleecing the South in the newly globalized trade system.

In its comparison of two major emerging nations, India and Brazil, this book approaches the subject through an innovative theoretical combination of developmental states theory and theories of the changing nature of global capitalism.

Comprehensive coverage of traditional economic problems and issues are strengthened in this textbook by the recognition that the economic perspective should be supplemented by insights from other social sciences. Features of this new Second Edition include: - concepts, theories and tools are emphasized rather than specific programmes - traditional topics such as location of activities, growth and development, economic structure, land use, neighbourhood development, and governance are presented in ways that connect theory to "the ground" realities - economic problems including transportation, poverty, immigration, education, urban management and housing are covered within the context of regional development - numerous quantitative tools including location quotients, shift/share analysis, local multipliers, input-output analysis, statistical modeling, cost/benefit studies, discounted cash-flow analysis, among others, are described in an easy-to-understand manner.

In this work, the authors offer a unified, transdisciplinary approach for achieving sustainable development in industrialized nations. They present an insightful analysis of the ways in which industrial states are unsustainable and how economic and social welfare are related to the environment, public health and safety.
