A basic diesel engine needs only a constant supply of clean fuel, plus air to provide oxygen for combustion. The amount of air needed is easy to underestimate - around one cubic metre per minute is required for every 10hp of engine power. Defective engine compartment ventilation, or clogged air filters, can therefore result in a loss of power.

reciprocating components like valves, pistons, rods and pushrods. The sound is an indicator of several issues such as low oil level, ill-adjusted valves, rod knock or noisy lifter.

~~Diesel Engine Noise Problems and Troubleshooting~~

Lack of throttling losses. Another reason for better diesel efficiency is the lack of throttling losses. Petrol engines need to maintain a correct air-fuel ratio. Burning fuel inside an engine is a chemical reaction and the ingredients for optimal combustion are 14.7 grams of air and 1 gram of petrol.
