It includes sample practice exercises for each subject area and a comprehensive question bank for practice, in all three media paper-pencil, online and on-mobile (GPRS only) platforms. It boasts of an up-to-date national and international Current Affairs section; the latest updates and downloadable test papers available free on the web companion site."

Innovation is the driving force behind economic growth. The knowledge that fosters innovation builds on both systematic research and serendipity. The availability of new knowledge—be it technological or organizational (social)—is, however, insufficient. An institutional structure must be in place that enhances mutual learning among the actors involved and that stimulates cooperation, as well as competition. This recognition has inspired this volume, which focuses on national innovation systems and sectoral (technology) innovation systems that differ widely between countries, due to their diverse historical paths and distinctive cultural and societal features. With regard to theory, most chapters incorporate a mix of endogenous growth theory and evolutionary thinking. Endogenous growth theory places an emphasis on the interplay between technological knowledge and various structural characteristics of the economy and society, as well as on the results of economic growth. Concepts related to technology development, accumulation of knowledge on technology, and technology diffusion feature prominently here. In evolutionary thinking, and in particular coevolutionary thinking, the focus is on close links between technology and institutions, whereby the functionality of technology is influenced by certain dynamic interactions with institutional systems. Information technology turns out to be a clear example of such a development.

The second volume targets practitioners and focuses on the process of green architecture by combining concepts and technologies with best practices for each integral design component

This thoroughly revised and enlarged edition brings to light the latest developments taking place in the area of Customer Relationship Management (CRM), and focuses on current CRM practices of various service industries. This edition is organised into five parts containing 19 chapters. Part I focuses on making the readers aware of the conceptual and literary developments, and also on the strategic implementation of the concepts. Part II discusses the research aspects of CRM. Part III deals with the applications of information technologies in CRM. Part IV provides the various newer and emerging concepts in CRM. Finally, Part V analyses the CRM applications in various sectors, industries and companies. Primarily intended as a textbook for the students of Management, the book would prove to be an invaluable asset for professionals in service industries. New to This Edition includes five new chapters, namely Research Techniques and Methods in Customer Relationship Management; Customer Satisfaction; Customer Loyalty; Service Quality; and Service Recovery Management, along with several additions of new text and revisions of the existing text. Provides latest advancements in CRM to keep the students abreast of these developments. Gives as many as 16 Case Studies with critical analysis of different industries to help the readers understand the subject. Covers a number of illustrations to elucidate the concepts discussed. Gives Project Assignment in each chapter.
