Nanotechnology. Nanoscale Engineering deals with materials and devices with critical dimensions that are of the order of 1 to 100 billionths of a meter.

Working at these scales can have a number of advantages. For instance, the properties of nanostructured materials can be tuned over a wide range. This engineering of materials arises, in large part, because devices have the same length scale as that of energy carriers such as photons, phonons, and electrons providing new freedoms to control ...
