An autonomous sailboat robot is a boat that only uses the wind on its sail as propelling force, without remote control or human assistance to achieve its mission. This involves autonomy in energy (using

batteries, solar panels, turbines...), sensor data processing (compass, GPS, wind sensor...), actuators control (rudder and sail angle control...) and decision making (embedded computer with adequate algorithms). Although robotic sailing is a relatively new field of research, several applications exist for this type of robots:

It was 1964 and Black men didn't fly commercial jets. But David Harris was about to change that ... After years of flying B-52 bombers in the United States Air Force, David Harris applied to be a pilot for commercial airliners, an opportunity no other African American

before him---not even the famed Tuskegee Airmen---had ever been afforded. After receiving rejection after rejection, he finally signed on with American Airlines in 1964. But this success was just the beginning of another uphill battle for equal treatment. It was the height of the civil rights movement, a time of massive
