The most artistic of ethnographic filmmakers, and the most ethnographic of artistic filmmakers, Robert Gardner is one of the most original, as well as controversial, filmmakers of the last half century. This is the first volume of essays dedicated to his work - a corpus of aesthetically arresting films which includes the classic *Dead Birds* (1963), a lyric depiction of ritual warfare among the Dugum Dani, in the Highlands of New Guinea; *Rivers of Sand* (1974), a provocative portrayal of relations between the sexes among the Hamar, in southwestern Ethiopia; and *Forest of Bliss* (1986), a sublime city symphony about death and life in Benares, India. Eminent anthropologists, philosophers, film theorists, and fellow artists assess the innovations of Gardner's films as well as the controversies they have spawned.

Composed by two prominent statesmen-generals of classical China, this book develops the strategies of Sun Tzu's classic, *The Art of War*, into a complete handbook of organization and leadership. The great leaders of ancient China who were trained in Sun Tzu's principles understood how war is waged successfully, both materially and mentally, and how victory and defeat follow clear social, psychological, and environmental laws. Drawing on episodes from the panorama of Chinese history, *Mastering the Art of War* presents practical summaries of these essential laws along with tales of conflict and strategy that show in concrete terms the proper use of Sun Tzu's principles. The book also examines the social and psychological aspects of organization and crisis management. The translator's introduction surveys the Chinese philosophies of war and conflict and explores in depth the parallels between *The Art of War* and the oldest handbook of strategic living, the *I Ching* (Book of Changes).

In *Learning with Information Systems* the author takes the developing world as the context and through a series of case studies develops a commonly used systems analysis methodology. He demonstrates how

this methodology can evolve and adapt as new ideas become prominent. Issues of sustainability of information systems, participation in systems design and user ownership of systems are all examined. This book does not attempt to be prescriptive for all contexts nor does it focus on any particular technology. It addresses the essential questions and promises practical approaches which will help in the avoidance of the worst forms of disaster associated with the planning of information systems for developing countries.

Covers basic anatomy and how to modify images for a more dramatic look, discusses inking and coloring techniques, compares comic book illustrations to animation, and offers advice for getting into the industry.

If you think that there is some new truth to be learned humanly, you will be disappointed because there is not a single new truth in the entire world. The truth revealed in this book is not my truth or my message, but the word of God which has been imparting itself to universal consciousness throughout all time. That word of God is already embodied in your consciousness, and this truth, which is already your consciousness, is now being unveiled to you within you. Unless God is my consciousness, there will be no truth expressing itself through, or as, me; and, moreover, unless God is your consciousness, you will not understand the truth that is being presented. But, since God is universal consciousness and since God is my consciousness, truth is expressing itself as this book.

The rise in computing and multimedia technology has spawned an increasing interest in the role of diagrams and sketches, not only for the purpose of conveying information but also for creative thinking

and problem-solving. This book attempts to characterise the nature of "a science of diagrams" in a wide-ranging, multidisciplinary study that contains accounts of the most recent research results in computer science and psychology. Key topics include: cognitive aspects, formal aspects, and applications. It is a well-written and indispensable survey for researchers and students in the fields of cognitive science, artificial intelligence, human-computer interaction, and graphics and visualisation.

A fully illustrated graphic adaptation that offers a new look at the Gettysburg Address, the bloody battle that prompted it, and the Civil War. Most of us can recall "Four score and seven years ago," but much of what we know about this historic speech, and what it has to say about the Civil War itself, has been lost since we left grade school. The Gettysburg Address offers a revolutionary way to experience Lincoln's masterwork. Striking at the underlying meaning of Lincoln's words, it uses the Address to tell the whole story of the Civil War. We see how bitter seeds sown by the Founding Fathers sprouted into a bloody war, and ultimately blossomed into the progress and justice of the Civil Rights era. The book depicts pivotal events that led to the upheaval of the secession crisis, the crucial Battle of Gettysburg, and the conflict's still-unfolding legacy with firsthand accounts from Americans from all walks of life: slaves, soldiers, citizens, and, of course, Abraham Lincoln himself—the most transformational president in U.S. history. Writer Jonathan Hennessey and illustrator Aaron McConnell illuminate history with vibrant, detailed graphics and captions that will give you a fresh understanding of this vital speech, which defined America's most tragic war and marked a new path forward.
