~~16.1 Genes and Variation~~

Example 1: Let's consider a gene with only two alleles. In mice, Black fur color (BB or Bb) is dominant to brown fur color (bb). In a population of 100 mice, 36 mice are homozygous dominant (BB), 48 mice are heterozygous (Bb) and 16 are brown (bb).
Relative frequency of B = $\frac{\# \text{ of B alleles in the population}}{\# \text{ of TOTAL alleles in the population}}$
