Christiaan Huygens was born on 14 April 1629 in The Hague, into a rich and influential Dutch family, the second son of Constantijn Huygens. Christiaan was named after his paternal grandfather. His mother was Suzanna van Baerle. She died in 1637, shortly after the birth of Huygens' sister. The couple had five children: Constantijn (1628), Christiaan (1629), Lodewijk (1631), Philips (1632) and ...

Cosmotheoros enjoyed a long period of popularity through the 18th century, and Huygens' ideas about life on the planets and in other solar systems became important for Immanuel Kant in his *Universal Natural History and Theory of the Heavens* of 1755. Reflection using Huygens Principle We can see a ray of light is incident on this surface and another ray which is parallel to this ray is also incident on this surface. Plane AB is incident at an angle ' i ' on the reflecting surface MN. As these rays are incident from the surface, so we call it incident ray.

Reflection and Refraction of Waves using Huygens Principle

Huygen's Principle Huygen's principle gives the geometrical details of travelling of a wave. This principle is used to find the position of the given wavelength at any instant of time.

Christiaan Huygens, also spelled Christian Huyghens, (born April 14, 1629, The Hague—died July 8, 1695, The Hague), Dutch mathematician, astronomer, and physicist, who founded the wave theory of light, discovered the true shape of the rings of Saturn, and made original contributions to the science of dynamics—the study of the action of forces on bodies.

The Mathematical Theory of Huygens' Principle : Bevan B ...

The wave theory of light was a way scientists understood light. The theory was first spread by Christiaan Huygens and Robert Hooke in the 17th century. They at that time predicted that the light was a wave as it could refract or bend when travelling from one medium to another, reflect off shiny surfaces, diffract around objects, etc.
