Discrete optimization problems are everywhere, from traditional operations research planning (scheduling, facility location and network design); to computer science databases; to advertising issues in viral marketing. Yet most such problems are NP-hard; unless $P = NP$, there are no efficient algorithms to find optimal solutions. This book shows how to design approximation algorithms: efficient algorithms that find provably near-optimal solutions. The book is organized around central algorithmic techniques for designing approximation algorithms, including greedy and local search algorithms, dynamic programming, linear and semidefinite programming, and randomization. Each chapter in the first section is devoted to a single algorithmic technique applied to several different problems, with more sophisticated treatment in the second section. The book also covers methods for proving that optimization problems are hard to approximate. Designed as a textbook for graduate-level algorithm courses, it will also serve as a reference for researchers interested in the heuristic solution of discrete optimization problems.

Practical Problems for Heating And Cooling Technicians, 6th Edition, provides students with the essential quantitative skills they need for success in the HVAC field. This text presents mathematical theories in concise, easy to understand segments, and reinforces each concept with multiple examples and practice problems from real-world HVAC tasks, including the latest in geothermal systems, and zone heating and cooling. Loaded with helpful visual features and study aids, Practical Problems for Heating And Cooling Technicians, 6th Edition puts key information at the students' fingertips with critical formula conversion charts, a glossary of updated HVAC-specific terms, and hands-on exercises designed to build confidence and comfort with basic mathematical skills. storytimes." --School Library Journal From New York Times bestselling author Chris Barton and new illustrator Louis Thomas comes a fun, rhythmic picture book about finding the music that is perfect for you! A boy who loves to make noise gets to pick only one instrument (at his parents urging) in a music store, but there is too much to choose from! There's triangles and sousaphones! There's guitars and harpsichords! Bagpipes and cellos and trombones! How can he find the one that is just right for him out of all those options?

Deep in her heart was death which believed that a life like hers could be perfect no more with such a ruinous start. Brokenness was all that she knew growing up, threatening callousness of heart. A modern-day Cinderella was make-believe as an opiate of our senses towards the cruelty of life. No good things would last, she came to believe. So, her safest bet was not to strive for them lest her fall would be more crippling from a greater height when life came crushing down on her again. By this she effectively put a curse on herself as she shut out future blessings that could have been hers. Life was an unknown and she did not know how it would turn out. To break this curse, she needed courage, faith and trust to respond to the call of love and let its transforming power to take hold of her so that she could blossom into the person she could be. It did not

promise plain sailing but riding through the storms, big and small, was the way of perfecting. To break hopelessness is having the faith to hope. She summoned all her courage to take this bumpy ride on invitation. Did she waver in her resolve? Did she manage to persevere? What did she discover about herself? Where would this bold step finally take her in life?
